

INDICATOR SHEET

1. Indicator name

Percentage of single-person households

Update date:	17/01/2023	Version:	1.1
---------------------	------------	-----------------	-----

2. Ambit

Main Scope	Social
Sub-Scope	Sociodemographic

3. Definition

The percentage of single-person households indicates the percentage of households in a given territory formed by a single person.

The percentage of single-person households is presented by municipalities and counties.

4. Calculation formula

$$\frac{\sum n_i}{\sum N_i} \times 100$$

Where:

- i represents the territory
- n are single-person households
- N Total households

5. Reading

Direct reading of the referenced number that is equivalent to the percentage of single-person households with respect to the total number of households in that given territory. Higher numbers indicate a higher percentage of single-person households.

6. Nocturnality

Annual

7. Font

INE. Experimental statistics. Atlas of household income distribution.

8. Limitations
